

Rodopi OSS

Open, scalable business solution for fast Time-To-Market and service integration in carrier-grade networks

Optional fully hosted business model for rapid roll-out and minimal infrastructure and support personnel

Expertise in converged IP services and key relationships with third party equipment providers (VoIP, Cable, Satellite, DSL, Wireless...)

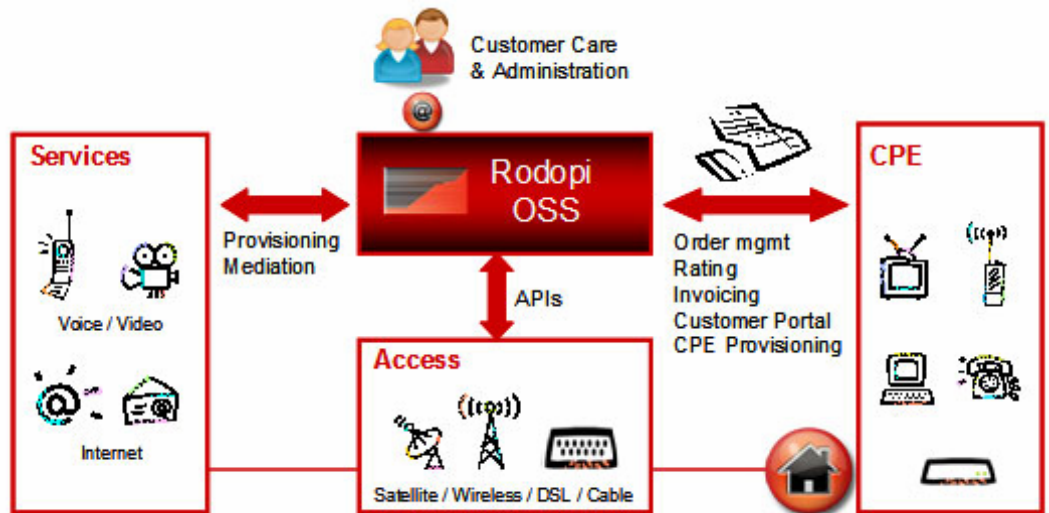

Affordable solution for all deployment sizes, with pay as you grow pricing models for reduced capital outlay and Total Cost of Ownership

Future-proof platform with extended capabilities for seamless implementation of Broadband and Multimedia services

xVNO OSS solutions to provide an ordering, provisioning, billing and self-care platform to supercharge wholesale business and flexibly manage resellers

Rodopi Software features **Rodopi OSS**, a unified platform for billing and provisioning of bundled IP based services, fully integrated with standards compliant third party hardware and software systems to provide an off-the-shelf, cost-effective broadband business solution.

Simplify your network operations and systems by installing **Rodopi OSS**, a carrier class business automation platform which provides a fully integrated billing and provisioning solution for broadband operators. Eliminating the vendor coordination and custom integration required with traditional approaches means increased velocity and reduced cost. Integrated billing and provisioning ensure coordinated updates and flexible evolution for all new and existing subscribers. Now your systems can keep up with market, service, and customer needs.

Integrations to leading network hardware, software, and third party external systems cover a broad range of applications including VoIP feature servers, outsourced and owned messaging systems, broadband access and device provisioning, credit card payment processing, usage collection and mediation, bandwidth management, and so on.

Our off-the-shelf integration modules and expert consulting services ensure that the end-to-end system will work equally well in a "green field" or established environment.

Licensed and hosted models maximize flexibility to meet capital and operating expense requirements. Avoid expensive software and IT infrastructure installations and personnel with hosted Software as a Service (SaaS), or maximize control with traditional licensing.

Rodopi is the leader in cost-effective, scalable solutions for next generation service providers. Rodopi's cost-effective and flexible pricing models enable you to reach profitability faster and pace your infrastructure investments with your subscriber base growth. Rodopi invests in your success with a pay as you grow model, allowing you to scale profitably and transition smoothly from a small to large subscriber base. When you succeed, we succeed.

Rodopi OSS features

- One time, recurring and usage based billing
- Unified invoicing, printed or electronic
- Flow through provisioning & customer account management
- VoIP / broadband data bundled service plans & billing
